LISTING OF THE CLAIMS

A detailed listing of claims is presented below.

Please amend currently amended claims as indicated below including substituting clean versions for pending claims with the same number. In addition, clean text versions of pending claims not being currently amended that are under examination are also presented. It is understood that any claim presented in a clean version below has not been changed relative to the immediate prior version.

- 1. (Currently Amended) A display unit comprising: a display panel of a personal digital assistant (PDA) comprising a pixel matrix comprising:
 - $\underline{\text{a rectangular}}$ and $\underline{\text{(m x n)}}$ pixel frame buffer region; and
 - [[an]] a fixed, active [[x]] pixel border region permanently dedicated to displaying a border for only displaying a display attribute, wherein said fixed, active pixel border region surrounds said rectangular pixel frame buffer region and comprises a width of two pixels;
- a frame buffer memory for containing image data for generating an image within said frame buffer region;
- a border attribute register dedicated for containing said border attribute display attribute for said border region, wherein said border display attribute is automatically selected to provide viewing contrast with

Group Art Unit: 2672

image data located near said border region, and wherein said display border attribute comprises color and intensity information for each pixel in said fixed, active pixel border region, and wherein said display border attribute is equal to a background attribute currently being displayed; and

a display controller coupled to said frame buffer memory, coupled to receive said display border attribute from said border attribute register, and coupled to control said display panel, said display controller for generating a first set of signals for rendering said image within said frame buffer region and for generating a second set of signals for displaying said display border attribute within said fixed, active border region.

- 2. (Original) A display unit as described in Claim 1 wherein said second set of signals are generated within invalid timing windows with respect to said frame buffer region.
- 3. (Original) A display unit as described in Claim 1 wherein a first portion of said second set of signals are generated in an invalid horizontal timing window that commences x clock cycles before valid data for said frame buffer region commences and wherein a second portion of said second set of signals are generated in an invalid horizontal

Palm-3541.CIP/ACM/LCH Examiner: Wang, J.

timing window that ends x clock cycles after valid data for said frame buffer region completes.

- 4. (Original) A display unit as described in Claim 3 wherein a third portion of said second set of signals are generated in an invalid vertical timing window that commences x horizontal pulses before a first valid horizontal line commences of a frame and wherein a forth portion of said second set of signals are generated in an invalid vertical timing window that ends x horizontal pulses after the end of the last valid horizontal line of said frame.
- 5. (Currently Amended) A display unit as described in Claim 1, wherein said display border attribute of said border region comprises a color attribute and an intensity attribute.
- 6. (Original) A display unit as described in Claim 1 wherein said display panel is a thin film transistor liquid crystal display panel.
- 7. (Canceled) Please cancel Claim 7 without prejudice.

Palm-3541.CIP/ACM/LCH Examiner: Wang, J.

- 8. (Original) A display unit as described in Claim 1 wherein said frame buffer region comprises 160 rows and 160 columns of pixels.
- 9. (Original) A display unit as described in Claim 1 further comprising a background display attribute register and wherein, by default, said border attribute register is equal to said background attribute register.
- (Currently Amended) A display unit comprising: 10. a display panel of a personal digital assistant (PDA) comprising a pixel matrix comprising: an (m x n) a rectangular pixel frame buffer region; and an x a fixed, active pixel border region permanently dedicated to displaying a border attribute for only displaying a display attribute, wherein said fixed, active pixel border region surrounds said rectangular pixel frame buffer region and contains top, bottom, right and left border regions, wherein said fixed, active pixel border region comprises a width of two pixels;
- a frame buffer memory for containing character data for generating character images within said frame buffer region;
- a border attribute register dedicated for containing said display border attribute for said border region, wherein said display border attribute is automatically selected to provide viewing contrast with character images located near said border region, and wherein said display Palm-3541.CIP/ACM/LCH 5 Serial No.: 09/724,197

Examiner: Wang, J.

<u>border</u> attribute comprises color and intensity information for each pixel in said fixed, active pixel border region, and wherein said <u>display border</u> attribute is equal to a background attribute; and

a display controller coupled to said frame buffer memory, coupled to receive said display border attribute of said border attribute register, and coupled to control said display panel, said display controller for generating a first set of signals for rendering said character images within said rectangular pixel frame buffer region wherein said first set of signals comprises vertical and horizontal invalid timing windows and wherein said display controller is also for generating a second set of signals for displaying said display border attribute within said fixed, active pixel border region.

- 11. (Original) A display unit as described in Claim
 10 wherein said second set of signals are generated within
 said vertical and horizontal invalid timing windows.
- 12. (Original) A display unit as described in Claim
 10 wherein said top and bottom border regions are rendered
 during said vertical invalid timing windows and wherein said
 right and left border regions are rendered during said
 horizontal invalid timing windows.

Palm-3541.CIP/ACM/LCH Examiner: Wang, J.

- 13. (Currently Amended) A display unit as described in Claim 10 wherein said display attribute comprises a color attribute and an intensity attribute.
- 14. (Original) A display unit as described in Claim
 10 wherein said display panel is a thin film transistor
 liquid crystal display panel.
- 15. (Canceled) Please cancel Claim 15 without prejudice.
- 16. (Original) A display unit as described in Claim
 10 wherein said frame buffer region comprises 160 rows and
 160 columns of pixels.
- 17. (Original) A display unit as described in Claim
 10 further comprising a background display attribute
 register and wherein, by default, said border attribute
 register is equal to said background attribute register.
- 18. (Currently Amended) A portable electronic device comprising:
 - a processor coupled to a bus;
 - a memory unit coupled to said bus;
 - a user input device coupled to said bus; and
 - a display unit coupled to said bus and comprising:

a display panel comprising a pixel matrix comprising: an (m x n) a rectangular pixel frame buffer region; and an x a fixed, active pixel border region permanently dedicated to displaying a border attribute for only displaying a display attribute, wherein said fixed, active pixel border region surrounds said rectangular pixel frame buffer region and comprises a width of two pixels;

a frame buffer memory for containing image data for generating an image within said <u>rectangular pixel</u> frame buffer region;

a border attribute register dedicated for containing said display border attribute for said fixed, active border region, wherein said display border attribute is automatically selected to provide viewing contrast with image data located near said fixed, active border region, and wherein said display border attribute comprises color and intensity information, and wherein said display border attribute is equal to a background attribute currently being displayed; and

a display controller coupled to said frame buffer memory, coupled to receive said display border attribute from said border attribute register, and coupled to control said display panel, said display controller for generating a first set of signals for rendering said image within said rectangular pixel

- 19. (Original) A portable electronic device as described in Claim 18 wherein said second set of signals are generated within video timing windows that contain invalid data with respect to said frame buffer region.
- 20. (Original) A portable electronic device as described in Claim 18 wherein a first portion of said second set of signals are generated x clock cycles before valid data for said frame buffer region commences and wherein a second portion of said second set of signals are generated x clock cycles after valid data for said frame buffer region completes.
- 21. (Currently Amended) A portable electronic device as described in Claim 18 wherein said display attribute comprises a color attribute and an intensity attribute.
- 22. (Original) A portable electronic device as described in Claim 18 wherein said display panel is a thin film transistor liquid crystal display panel.
- 23. (Original) A portable electronic device as described in Claim 18 further comprising a background Palm-3541.CIP/ACM/LCH 9 Serial No.: 09/724,197
